

testimonial

"We appointed Klick Technology to undertake two fast-track laboratory fit-out projects at almost opposite ends of the country. They were very proactive in their approach to both projects which demanded additional and imaginative storage solutions suitable for the limited space within the clients specialised laboratory facilities. Klick Technology resolved any minor issues that arose and were well organised in fully coordinating and interfacing their site activities with other sub-contractors. Both projects were completed on-time and within budget..."

Phil Ardern - Regional Director, Bassaire Limited

Baxter Healthcare, Cowley, Oxfordshire

Supply and installation of furniture for pharmaceutical aseptic suite

Value: £ 23k

Client: Bassaire Ltd

Duration of works: 1 week

Project Details:-

- > Site survey
- > Design of furniture and layout
- > Manufacture of furniture
- > Pre-installation survey
- > Delivery and distribution of furniture on site
- > New furniture installed

The brief was to maximise the storage space within the laboratory whilst maintaining the highest levels of cleanliness. Klick designed island and perimeter units with shelves underneath which were all fabricated in Trespa, to suit the client's brief.

Steelwork was fully welded to maximise load bearing capacity and for improved hygiene. Where Trespa shelves were notched around steel frameworks the gaps created were sealed minimising dirt traps.

Klick liaised closely with Bassaire's appointed project manager, overcoming a number of design issues in the initial phases of the project. These were resolved promptly to avoid any delay to the schedule and the job was completed smoothly and on time.
